Hack Malaria

Malaria is the number one killer in Ghana

Ghana has around *3.5 million* reported clinical cases of malaria annually with nearly one million of those in children under the age of five. This equates to 6.7 new diagnosed cases of malaria per minute and *1.6 deaths of children under the age of five per hour.*

As a part of the international development and volunteer community in Ghana, we view fighting malaria as imperative.

In a collaborative effort the SWAT Malaria Initiative has teamed up with the Tech Think Tank (T³) to add a modern twist to Peace Corps' oldest malaria initiative. We intend to apply technological innovations that will bring us to the forefront of the ever-changing battlefield against malaria.

We are hosting a hackathon with the support of **Coders4Africa** and **Mobile Web Ghana**. We will develop a number of malaria education applications.

coders africa   More Than Code. Practical Solutions.

The event will be held at Mobile Web Ghana in **Madina, Accra** on July 12th and 13th. All interested computer programmers and coders should contact us. **Meals and prizes will be provided.**
