

Report on GLAM Wiki Dashboard

Issue 1

There's a significant space between new additions to the platform. WMB's goal is to use the GLAM Wiki Dashboard as our main metrics platform for our partners. We have currently, if not mistaken, 28 GLAMs pending on the addition on the platform, half of those submitted on June 2021 and the other half on November/December 2022.

Issue 2

The file search, which we suppose will lead us to metrics about a specific file gives a 502 Bad Gateway error.

Issue 3

The name of the institution on the top navbar redirects us to the main page of the dashboard, not the specific page for the institution

Issue 4

When on a page of charts, the dropdown menu at the top defaults to "User contribution". When clicked to select another chart, it sends us to the User contribution chart. I suspect that it is being fired "onclick" instead of "onchange" or "onselect".

Issue 5

The report functionality allows one to select a future month and download the report for that month, which has metrics filled. For example, selecting the month of March 2023 on the [Museu do Futebol GLAM](#).

Issue 6

The report functionality allows one to select a month in the past before the beginning of the fetching of metrics or the Wikimedia projects and download a report for that month, which has metrics filled. For example, selecting the month of January 1999 on the [Museu do Futebol GLAM](#).

Issue 7

Within a valid period of time for the partnership, when downloading the report for a specific month, we can see that some metrics are static. For example, selecting the month of October 2021 on the [Museu do Futebol GLAM](#):

Metric		Given	Expected
Total media files		99	3
Total views for month		787	787
Usage - No of articles		0	0
Usage - No of projects involved		0	0

	Average views per day for this month	28.29	8.7

It seems that for the second page, it takes the metrics for the current most viewed images, with no regard to the month selected.
