Call for Papers

Communication, Science and Higher Education

Editor-in-Chief: Agnieszka Jeran
Editor: Emanuel Kulczycki

The development of communication technologies and the spread of the Internet have brought about various transformations of the ways how we communicate in science and higher education. The social media are used to promote research, gathering empirical data and communicating science. It is clear that the social media are an inevitable part of every communicative process in higher education. The issue, Communication, Science and Higher Education, will be devoted to cultural changes and transformations that take place in contemporary science, scholarly communication and universities.

We would like invite you to submit original articles that investigate the transformations of communication practices, science communication and their impact on the various areas of academic and scientific life. The aim of the issue will be to collect the works that represent thought, research and critical voices on various cultural approaches to these problems.

We suggest the following range of topics:

• Using social media in scholarly communication;
• Science popularization in the Age of Twitter, Facebook, Instagram etc.;
• Transformations of universities after the spread of the Internet;
• Twitter and Higher Education;
• Websites for scholars: Academia.edu, ResearchGate.net, Mendeley etc.;
• Open Access and Open Science;
• Bibliometric and scientometrics tools in 21st century;
• Evaluation of Science in the context of contemporary scholarly communication;
• Altmetrics – is it possible to abandon Impact Factor?

Submissions:
Submissions (English only) should be sent via the journal management and publishing system (www.kultura-i-edukacja.pl) by February 15th 2015.
